

Welcome to European Logistics Management

We are providing reverse logistics solutions for returnable transit packaging (RTP) in many industries since 1991. Today, we have customers in eight countries and manage packaging pools throughout the European Union on their behalf.

Making best use of the latest information and communication technology, our international team can be relied upon to manage your pool of transit packaging.

Through our Europe-wide depot and logistics network, our target is to

- maximise returns
- minimise RTP losses
- increase pool rotation

thereby maximising our customers investment in RTP.

Our customers benefit from our contacts in the industry and the extensive team of transit packaging engineers within Scott Group Ltd.. We will work with you to select the best pack design for your application.

We ensure that the transit packaging selected will provide the best level of protection for our customers products, facilitate efficient reverse logistics costs and is robust enough to withstand the rigors of its environment.
